EXPERIENCE

ResourceDekho IT Services Pvt. Ltd.

Dec 2025 – Present

DevOps Engineer

Remote

- Automated infrastructure provisioning and application deployments using Terraform, Ansible, and GitOps practices, ensuring secure, consistent, and compliant environments.
- Designed and deployed containerized microservices on Amazon ECS, boosting service isolation, scalability, and deployment flexibility across environments.
- Configured and sustained VPN solutions to enable secure remote access to cloud-hosted infrastructure and applications, delivering encrypted communication and controlled access.
- Led the migration of manually operated infrastructure to Terraform-based Infrastructure as Code, curbing configuration drift and reinforcing deployment consistency.
- Enforced GitOps-driven Kubernetes deployments using Argo CD's App-of-Apps architecture, centralizing management and streamlining application synchronization across environments.
- Administered and optimized Amazon EKS clusters, performing cluster upgrades, capacity planning, and security hardening to safeguard high availability and reliability.
- Oversaw compliance monitoring and standardized security controls using Sprinto, AWS GuardDuty, and WAF, strengthening threat detection, audit readiness, and compliance tracking.
- Established monitoring and alerting frameworks using Prometheus, Grafana, Loki, and Fluent Bit, advancing observability, performance tracking, and incident response.
- Architected and maintained Jenkins CI/CD pipelines to streamline application builds, testing, security scanning, and deployments across Kubernetes environments.

Vavensoft Pvt. Ltd.

May 2024 – Dec 2025

DevOps Engineer

Mohali, India

- Built, executed, and sustained CI/CD pipelines using GitHub Actions, Bitbucket Pipelines, GitLab CI/CD, Jenkins, and AWS CodePipeline, trimming release time and lifting delivery efficiency.
- Containerized applications using Docker and orchestrated workloads on Amazon EKS and ECS, ensuring scalable, highly available, and fault-tolerant environments.
- Managed hosting on Ubuntu servers, including web server configuration, database setup, system administration, and security hardening.
- Provisioned and monitored AWS services including ECR, S3, RDS, IAM, ACM, SNS, SES, CloudFront, and Load Balancers to support secure, resilient production environments.
- Enabled VPC peering and cross-account networking for secure connectivity between isolated environments, lowering latency and simplifying inter-service communication.
- Collaborated closely with development teams to simplify release workflows, sharpen delivery processes, and guarantee reliable software rollouts.
- Implemented monitoring and alerting solutions using Prometheus, Grafana, and AWS CloudWatch, enabling proactive issue detection and stronger system reliability.

PROJECTS

AWS Multi-Account Organization Setup & SSO Implementation

- Set up an AWS multi-account organization (Dev/UAT/Prod), improving isolation, governance, and cost visibility by 40%.

- Migrated core resources (RDS, S3, EC2) from the root account to organizational units (OUs) with zero downtime, reducing operational risk by 60%.
- Rolled out SSO with Entra ID and IAM Identity Center, cutting manual access management by 80% and strengthening RBAC security.

ShopfloorGPT Deployment using Kubernetes, Terraform, GitLab

- Deployed ShopfloorGPT on AKS using Terraform, making infrastructure fully reproducible and reducing setup time by 70%.
- Engineered GitLab CI/CD pipelines for automated builds and deployments, cutting manual release effort by 80%.
- Optimized and maintained the AKS cluster, improving performance and lowering compute costs by 30%.

Kubeadm to Kubespray Migration

- Transitioned an existing kubeadm-based Kubernetes cluster to Kubespray, enhancing reliability, scalability, and lifecycle management.
- Replaced manual shell-script workflows with Ansible-based automation, shrinking configuration effort by 70% and minimizing human error.
- Modularized the entire deployment codebase, making it reusable, consistent, and easier to manage across multiple clusters.

TECHNICAL SKILLS

- **Operating Systems:** Linux (CentOS, Ubuntu, RHEL) — user, process, file, and disk management
- **Cloud & Infrastructure:** AWS (EC2, EKS, ECS, VPC, IAM, RDS, S3, CloudFront, ECR), Microsoft Azure, Google Cloud, Terraform
- **DevOps & Automation:** CI/CD, Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket Pipelines, Ansible, Argo CD, GitOps
- **Containers & Orchestration:** Docker, Kubernetes, Helm
- **Monitoring & Observability:** Prometheus, Grafana, Loki, Fluent Bit, AWS CloudWatch
- **Compliance & Security Automation:** Sprinto, VPNs, IAM, security hardening
- **Programming, Scripting & Version Control:** Python, Bash, PowerShell, Git, GitHub
- **Networking & Security:** TCP/IP, DNS, DHCP, subnetting, VPNs, load balancers
- **Databases:** SQL, NoSQL

CERTIFICATIONS

- [Linux – RHCSA, Red Hat](#)
- [Microsoft Certified: Azure Fundamentals](#)
- [GitHub Foundations, GitHub](#)
- [Python for Data Science, IBM](#)
- [SQL, Coursera](#)
- [DevOps Foundations: CI/CD, LinkedIn](#)

EDUCATION

Chandigarh University

2022 – 2024

MCA – Cloud Computing & DevOps | CGPA: 7.70

Himachal Pradesh University

2019 – 2022

BCA | CGPA: 8.50
